PROBLEM SET POLICY

ECET 250E – Linear Circuits 1 | Fall 2026

Mozhgan Bacon

Thirteen problem sets, one for each chapter. Worth 5% of your final grade for practising, not for being right.

1. WHAT PROBLEM SETS ARE

Problem sets are practice. They are not assignments, and they are not marked for correctness. There are thirteen, one for each chapter, and together they are worth 5% of your final grade. You earn that 5% by doing the work and handing it in on time.

Each problem set is due before the quiz, midterm or final that covers its chapter. The schedule is built that way on purpose. By the time you sit an assessment, you will already have worked through the material once.

Due-date rule: each problem set is handed out in the first lecture of its chapter week and is due the following Monday, by the start of the 9:30 am lecture. If that Monday is a statutory holiday, it's due at the next teaching day's class instead - this affects Problem Set 5 only, due Tuesday, October 13 at 1:30 pm, because the College is closed Monday, October 12 for Thanksgiving.

2. THE SOLUTION KEYS ARE OPEN FROM DAY ONE

All thirteen keys go up on D2L on the first day of class. Nothing is held back and nothing appears late. I am not trying to keep the answers from you. I want you to do the work, and that only happens if you use the keys in the right order:

1. Try it on your own. Keep the key closed. Use your textbook, your lecture notes and your lab work.
2. Hand in what you produced, by the deadline, including any question you could not finish. If you got stuck, leave the stuck part in so I can see where.
3. Open the key afterwards. Find where your reasoning went wrong and correct it yourself before the quiz.

Looking at the key first will feel like the faster route. It is the most common reason a student is caught out by a quiz. You do not learn to solve a circuit by reading someone else's solution.

3. WHAT EARNS THE MARK

Effort, shown on the page, and submitted on time.

A question counts once I can see that you worked it. Write out your steps, label your diagrams, and keep your units. If the final answer is wrong, that costs you nothing. I am not marking your arithmetic. I am looking for evidence that you sat down and practised.

Nothing is earned by a blank page, by a column of final answers with no working, or by a copy of the key.

4. HANDING IT IN

Each problem set is handed out in the first lecture of its chapter week and stays open for roughly one to two weeks. Submit your files to D2L by the start of class on the due date, unless I tell you otherwise.

The due date and time shown on D2L is the official one: if this schedule and D2L ever disagree, go with D2L.

Name your PDF: *ECET250E-PS03-Lastname-Firstname.pdf*

5. WORKING TOGETHER, AI AND INTEGRITY

Talk the concepts through with your classmates. What you hand in has to be your own work, and it has to be legible.

You may use AI tools and online solvers on problem sets and labs unless a handout says otherwise. The solution key counts as one of those tools. Whatever you used, name it in a line at the top of your submission.

You should be able to explain anything you hand in, in your own words. If you cannot, the work may receive reduced or no credit. Please do not post course material on public or shared sites. AI tools and online solvers are not permitted in quizzes, tests or exams. Camosun's academic integrity policies apply throughout.

6. QUESTIONS AND REGRADES

Ask early. If something does not make sense, come and see me rather than waiting for the quiz to find out. If you believe a grade is wrong, email a short explanation to Baconm@camosun.ca within one week of it being posted.

Hand-out and due dates for every problem set are on the Key Dates sheet and on D2L.

- *The solution keys are published on the first day of class, rather than after each due date.*
